Experience

Software Development Engineer

[Wohlig](#)

Vidyavihar, Mumbai

03/2023 - Current

- Built a vast e-commerce platform for a leading fantasy sports company, serving millions of users. Empowered by state-of-the-art tech, It ensures smooth point redemption for a seamless user experience.
- Led the engineering team in developing a dynamic news and media portal akin to Cricbuzz, which gained significant traction. Delivered real-time updates and personalized content to sports enthusiasts, fostering an engaging user experience.
- TUI: Requirements writing AI assistant. Implemented secure authentication with Cognito, covering login, token refresh, and expiry. Enhanced user experience with streamlined one-click flow, optimized with loaders, alerts, clipboard functionality, and robust API error handling. Introduced new feedback capabilities like ChatGPT integrated with third-party API. Addressed token expiration issues in AWS Cognito through auto-login feature, ensuring seamless user experience leveraging React and its ecosystem.
- Confixa Single-handedly developed the company's primary DevOps platform website, crafting an interactive, animated, and responsive site from concept to launch.
- Leading a multifaceted 8-repository project with full-stack development, ensuring smooth integration between frontend and backend. Personally implementing features, optimizations, and fixes to deliver a unified user experience.

Frontend Developer

Lower Parel, Mumbai

07/2022 - 01/2023

- Employee Information Module: Manage and track employee details, enabling CRUD operations for easy record maintenance.
- Leave Management Module: Streamline leave requests, approvals, and tracking, providing a transparent overview of leave balances.
- Attendance Tracking Module: Efficiently monitor and record employee attendance, with options for manual entry and detailed reporting.
- Performance Evaluation Module: Facilitate goal setting, regular evaluations, and performance analytics for effective talent management.

Projects

- [STRING UTILS](#): Developed a comprehensive JavaScript library for string manipulation, featuring functions like capitalization, camelCase, snakeCase, kebabCase, titleCase, and string reversal. Published on npm and implemented CI/CD with Travis CI. Wrote extensive documentation and unit tests. Licensed under MIT for open-source collaboration.
- [CRYPTOSTREAM](#): Developed a real-time cryptocurrency tracking application using React and Material UI, integrating with a public API to fetch and display live cryptocurrency data. The application features an interactive dashboard for monitoring cryptocurrency prices and trends in real time, with a clean and responsive user interface designed using Material UI.
- [DIGISHOP](#): Designed and built an ecommerce web application from front to back utilizing MongoDB, Express, React, Node.js (MERN) for the database, backend API, frontend user interface, and overall stack.
- [REVIEW HUB](#): Created a platform for users to share movie and web series reviews with upload and OTP authentication functionality powered by a Firebase backend.
- [VOICE TO TEXT](#): Developed Speech to Text Converter, a React hook that converts speech from the microphone to text and makes it available to React components.
- [LINKEDIN CLONE](#): Engineered a LinkedIn replica web application enabling user signup/login and real-time posting with Redux state management and Firebase database integration.
